Injury Prevention and Safety

Injury Prevention and Safety exams the history, philosophy, and procedures of safety and accident prevention with emphasis on areas related to physical activity, athletics, household, industrial, workplace, school and traffic safety. This course will be taught predominantly online with support of mentors assigned geographically.

Driver Task Analysis (Introduction to Driver Education)

Driver Task Analysis forms the backbone of the curriculum, administration, legal, organizational, financial and procedural aspects of Driver Education. This course will prepare prospective Driver Education teachers to develop, maintain and evaluate existing as well as new program designs.

Methods of Teaching Driver Education: Classroom

This classroom methods course contains two major objectives: one concentration of the clinical aspects and methods of teaching Driver Education in the classroom, and the development of strategies, content and materials, using a variety of instructional methods.

Methods of Teaching Driver Education: Behind the Wheel

This course examines methods for delivering a sequential in-vehicle phase of a Driver Education program. Includes program organization, route and lesson design, instructional delivery methods, verbal cues, and assessment of behind-the-wheel lessons in a dual controlled vehicle. Additionally, this course will also require the Teacher Endorsement candidate to be present for in-car observation and hands-on experience.

Methods of Teaching Driver Education: Simulation and Range

This course examines the methods for delivering the Simulation and Range phase of Driver Education. Includes Simulation and Range program organization, development, design, scheduling and teaching strategies and techniques. This course will also require the Teacher Endorsement candidate to be present for field experience at a school that has simulation and range instruction.)
